CAVITY SUITES

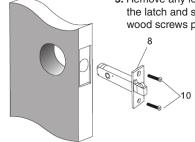

Product codes: 5327 | 5328 | 5331 | 5332

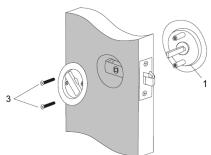

- Fold the template where indicated on the door edge at the desired latch height.
 Firmly hold the template in place and mark the latch height and escutcheon hole centre at the required backset.
- 2. Measure the door thickness and mark the centre. Drill a 25mm (1") diameter hole through the door. Ensure this hole is square to the door.
- Drill a 54mm hole through the door. We recommend using a 54mm hole saw. For clean cut-outs, drill from both sides, meeting in the middle of the door.

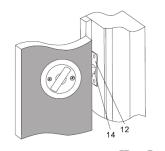

6. Assemble the external escutcheon (1) to the door with the posts for the screws. Then assemble the internal escutcheon with the screw holes to the door. Fasten the escutcheons with the screws provided (3). Check the latch moves freely and readjust the escutcheons if required.

- 7. Close the door against the frame and mark the latch (14) position for fitting of the striker. (12)
- Router or chisel a recess to a depth of 1.6mm so the striker fits flush.
- Using the template provided drill two 19mm diameter holes to a depth of 15mm to allow for the latchbbolt. Fit and fasten the striker (12) with the screws provided. (13)
